PROFESSIONAL SUMMARY

I like understanding how things work and finding a better way to do them. When something gets stuck, I don't let it go until I find the way out. What moves me is the moment someone stops doing by hand what they had done for years. My strongest ground is Angular, Node.js and PostgreSQL, though I also work with other languages and tools across the TypeScript and JavaScript ecosystem, and I'm genuinely interested in AI and what can still be built with it. Even when something already works, I keep thinking about how to make it simpler and faster. I learn something new almost every day, I like bringing ideas before anyone asks for them, and I like working with people who take their work seriously.

PROFESSIONAL EXPERIENCE

Software Developer
Universidad de Ciencias Aplicadas y Ambientales —
U.D.C.A Bogotá, Colombia | January 2025 - Present

Stack: Angular, TypeScript, Node.js, Express, PostgreSQL, Power BI, Chart.js, Git

- Developed and enhanced the Institutional Information System (SII) by building web modules for academic, administrative, and operational departments.
- Implemented modules for employee check-in and check-out control, student locker management, sports inventory, item loans, instructor class lists, and class session logging.
- Integrated Azure AD authentication to strengthen security and user access control.
- Developed interactive dashboards and automated Power BI reports for institutional analysis and decisionmaking.
- Implemented dynamic Chart.js visualizations embedded directly in web applications.
- Automated internal processes, reducing operational processing times and manual errors.
- Contributed to requirements analysis, functional testing, technical support, and the continuous improvement of digital solutions.
- Prepared technical reports and supported internal users in the adoption of new features

PROJECTS

Susténtalo - Learning Platform with Assessments (Founder)

Tech Stack: JavaScript, HTML, CSS, Node.js, Vercel Functions, PostgreSQL (Neon)
Website: sustentalo-landing.vercel.app

- Designed and launched a free Spanish-language platform for learning software development, where every topic is passed with an assessment and every module with an oral defense.
- Built the landing page with an interactive JavaScript diagnostic (10 questions, a 0-5 grade, and per-area feedback) and a waitlist connected to PostgreSQL through serverless functions.
- Defined the curriculum (12 modules and 100 topics), the visual identity, and a validation strategy based on conversion metrics.

ClientPulse AI - AI-Powered SaaS Platform

Tech Stack: Angular 19, Node.js, Express, TypeScript, PostgreSQL, Gemini AI, JWT, RBAC, Chart.js
Live demo: clientpulse-ai-seven.vercel.app

- Designed and developed a SaaS platform for customer management, support ticket analysis, and churn-risk prediction.
- Integrated Google Gemini AI for sentiment, frustration, priority, and request-type analysis, as well as recommendation generation.
- Implemented an analytics dashboard, JWT authentication, role-based access control, multi-tenant management, and company-configurable modules

Mundial 2026 - FIFA World Cup 2026 Dashboard

Tech Stack: Angular 21, Signals, TypeScript, Chart.js, Bootstrap 5, Vercel Serverless
Live demo: mundial-2026-gold.vercel.app

- Developed a dashboard with results, KPIs, top scorers, groups, full fixture, and knockout bracket, consuming the football-data.org API.
- Implemented a Vercel serverless proxy to keep the API key off the client.
- Built the knockout bracket with computed SVG connectors between rounds and dynamic Chart.js visualizations.

Cronograma - Real-Time Collaborative Project Planning

Tech Stack: Angular 21, Signals, Supabase (PostgreSQL, Auth, Realtime, RLS), ExcelJS, Vercel
Live demo: cronograma-xi.vercel.app (demo@cronograma.app / demo1234)

- Built a real-time collaborative tool where the same activities are read as a Gantt chart, a calendar, a Kanban board or a list, all editable by dragging.
- Designed access control in PostgreSQL: four permission roles enforced with Row Level Security and security definer functions, not in the client.
- Implemented Excel import and export with ExcelJS: a validated template, a row-by-row error preview and an atomic import inside a single transaction.

EDUCATION

Software Engineering — Bogotá, Colombia | Present
Corporación Universitaria Minuto de Dios (UNIMINUTO)

Technology Degree in Software Analysis and Development — Vélez, Santander | 2025
Servicio Nacional de Aprendizaje (SENA) - Vélez, Santander

Programming with JavaScript — 2025
Coursera

High School Diploma with a Concentration in Technical Drawing — Moniquirá, Colombia | 2021
Institución Educativa Técnica Antonio Nariño

TECHNICAL SKILLS

Frontend: Angular 19+, Angular 21, TypeScript, JavaScript, HTML5, CSS3, Bootstrap, React, Next.js, Tailwind CSS, Chart.js, SCSS

Backend: Node.js, Express.js, REST APIs, JWT, bcrypt, role-based access control (RBAC)

Databases: PostgreSQL, Supabase, MongoDB, MySQL, relational data modeling, multi-tenant design, SQL querying, and information management

Data Analytics and AI: Power BI, dashboards, automated reports, indicator visualization, Google Gemini AI

Authentication and Integrations: Azure AD, Microsoft Identity, API consumption, external service integration

Tools and Methodologies: Git, GitHub, Vercel, Scrum, Agile methodologies, requirements analysis, functional testing

SOFT SKILLS

Analytical thinking · Problem-solving · Effective communication with technical teams and business users · Organization and time management · Collaborative work · Adaptability and continuous learning · Accountability · Results orientation · Proactivity and continuous improvement
